

KHAJA RAHEEL AHMED MOHIUDDIN

Master - Python Coding Specialist - AI Trainer | LLM Systems | RLHF | AI Operations

Warangal, India | +91-7013691213 | khajarahil0909@gmail.com

PROFESSIONAL SUMMARY

AI Trainer and LLM Specialist currently contributing to Invisible Technologies' Meridial platform on Google-aligned AI projects, promoted to Reviewer after delivering 1500+ production-grade LLM training and evaluation tasks. Deep expertise across RLHF pipelines, model alignment, and personalization-focused AI evaluation, backed by a software engineering background in Python, React, and production systems. Seeking to bring this combination of AI evaluation rigor and engineering fundamentals to a fast-moving product and engineering team.

CORE SKILLS

AI Training & RLHF: LLM Training, RLHF Pipelines, Human Preference Data Curation, Response Ranking, Model Alignment

LLM Evaluation & Ops: Model Evaluation, Prompt Engineering, Debugging LLM Outputs, Failure Analysis, Edge-Case Testing, AI Quality Review, Production AI Workflows

Domain Expertise: Python, Kotlin, JavaScript, TypeScript, React, REST APIs, Microservices

Tools & Platforms: Meridial Platform, Git, GitHub, GitLab, CI/CD, AWS SageMaker, SonarQube, Jest, Agile, Jira

PROFESSIONAL EXPERIENCE

Master - Python Coding Specialist - AI Trainer

Oct 2025 – Present

Meridial – Invisible Technologies (Google-aligned Projects)

- Delivering 1500+ high-quality LLM training and evaluation tasks on Invisible Technologies' Meridial platform, directly improving model accuracy, reasoning, and instruction-following behavior for Google-aligned AI systems.
- Promoted to Reviewer, responsible for auditing 1000+ model outputs for logical correctness, edge-case handling, and production-grade quality standards, ensuring Invisible's AI training output meets enterprise client expectations.
- Conducted deep LLM performance analysis, identifying failure patterns and implementing structured human feedback loops to improve response quality and reduce model errors at scale.
- Led evaluation of code-generation models (Python, Kotlin), validating output correctness and adherence to software engineering best practices.
- Applied RLHF methodologies to strengthen model alignment and robustness, supporting production-grade results for enterprise clients.

AI Training Data Specialist

Mar 2025 – Sep 2025

Soul AI (Deccan AI)

- Contributed to RLHF-based LLM training pipelines, curating preference data and improving model instruction-following, contextual reasoning, and output consistency at scale.
- Evaluated and refined LLM responses across diverse task categories, applying production-readiness benchmarks to ensure model reliability and quality.
- Identified recurring failure patterns in model outputs and provided corrective annotation signals, directly improving training data quality.

Associate Software Engineer

Dec 2023 – Feb 2025

Tech Mahindra

- Built and optimized production-grade frontend systems for Singapore Land Authority, improving application performance, scalability, and user experience.
- Collaborated with backend teams on API integration and distributed systems workflows; implemented unit tests using Jest to increase code quality and reduce production defects.
- Played a key role in a successful December 2024 production deployment, contributing to design and code reviews that ensured best practices across the team.

KEY PROJECTS

Project: Grizzly (Google - LLM Code Intelligence Simulation)

2025

Meridial – Invisible Technologies

- Simulated real-world developer workflows using LLM systems for a Google-aligned project; designed and resolved bug reports, feature requests, and repo-level issues; delivered production-grade Kotlin patches with testing and validation.

Project: Toucan (Google - RLHF System Training)

2025

Meridial – Invisible Technologies

- Delivered structured human feedback to improve LLM response quality, evaluating code correctness, logical reasoning, and instruction-following.
- Improved model alignment, reliability, and response consistency across training cycles.

Project: P13N Personalization (Google - AI Personalization System)

2025

Meridial – Invisible Technologies

- Focused on user behavior analysis, preference modeling, and context-aware AI response generation by comparing side-by-side model outputs with and without personal context integrated, across varied prompt types.
- Aimed to improve personalized AI experiences using historical interaction data to support model training decisions.

IoT Intrusion Detection System

2023

ML Research

- Achieved 96.3% classification accuracy using supervised ML on UNSW-NB15 & Bot-IoT datasets, demonstrating strong data processing, feature selection, and model evaluation skills.

Airfare Prediction System

2023

ML Project

- Built end-to-end regression ML model achieving 80–90% accuracy, enabling cost optimization via predictive analytics.

StegoSecure

2022

Python Security Project

- Developed a Python-based LSB steganography encryption system, securing sensitive data within image formats, showcasing advanced Python and algorithm design skills.

EDUCATION

B.Tech in Computer Science & Engineering

2019 – 2023

Balaji Institute of Technology and Science, Warangal | CGPA: 7.71

CERTIFICATIONS & ACHIEVEMENTS

- IEEE Publication – Evolution of Data Science in Information Technology
- Cisco Certified – Python Essentials & Cybersecurity Essentials
- AWS SageMaker (No-Code ML) & Streamlit – ML deployment and application development
- Virtual Experience Programs – Deloitte, Goldman Sachs, JP Morgan
